

Multi-Purpose Shock-Absorbing Safety Padding  
Industrial - Commercial - Transportation - Military - Recreational

## CUSTOM SHAPES & COLORS

If you have a need for a custom shape or design, we look forward to meeting your requirements.

However, please note that this is best for products with a production run of hundreds or thousands of units. There are design, prototype and mold preparation costs that the customer must pay up front.

For "**any**" new or custom product there are several steps. Any change or modification is considered a new product.

- determine precise dimensions
- determine the degree of foam density & skin thickness
- create a CAD drawing
- design & fabricate a prototype mold
- prepare prototype
- adjust mold & formula as required
- test & confirm prototype
- select Pantone color(s)
- determine the level of fire rating (tests not included)
- determine the level of UV resistance (tests not included)
- fabricate production mold(s)
- run a minimum of 500 pieces/color

This process can take several weeks and will require up-front design fees as well as pre-production and production expenses.
